### Bio

#### BIO

Dr. Kathleen Poston is the Edward F. and Irene Thiele Pimley Professor in Neurology and Neurological Sciences at Stanford University. She received her Bachelor's of Science in Bioengineering at the University of Pennsylvania, her Master's Degree in Biomedical Engineering and her MD at Vanderbilt University. She completed her Neurology residency training at UCSF, completed a fellowship in clinical Movement Disorders at Columbia University and post-doctoral research training in Functional Neuroimaging at the Feinstein Institute.

Dr. Poston's research and clinical emphasis is to understand the motor and non-motor impairments, such as dementia, that develop in patients with alpha-synuclein pathology, such as Parkinson's disease, dementia with Lewy Bodies, and Multiple System Atrophy. Her lab uses functional and structural imaging biomarkers, along with biological and genetic biomarkers, to understand the underlying pathophysiology associated these symptoms.

Dr. Poston is Chief of the Movement Disorders Division and holds an appointment in the Memory Disorders division. She is a founding member of the Stanford Alzheimer's Disease Research Center and co-Director for the Lewy Body Dementia Association Research Center of Excellence at Stanford University, and Director of the Stanford Parkinson's Foundation Center of Excellence.

## **Research & Scholarship**

---

### **CURRENT RESEARCH AND SCHOLARLY INTERESTS**

Dr. Poston's research applies multi-modal biomarkers to study cognitive impairment and dementia in patients with Parkinson's disease (PD), dementia with Lewy bodies (DLB), and other parkinsonian disorders. Dementia is a highly prevalent and grievous consequences of neuronal synuclein disease, but it is an essentially untreatable symptom that has multiple, evasive etiologies. Dr. Poston's lab uses biological markers, including plasma and CSF, along with neuroimaging to unravel these etiologies by studying brain regions vulnerable to various co-pathologies that develop in these patients, and then determining the associated changes in clinical progression and symptom evolution. She collaborates with colleagues across campus to integrate genetic and pathological data into these studies as well.
