Bio

Hannah is an undergraduate in the Earth Systems Program with a focus on Land Systems and is primarily interested in land use and the methods used to monitor land use change. She is a student advisor for the Earth Systems program as well as a docent at Jasper Ridge Biological Preserve. Hannah is originally from Spearfish, South Dakota located in the beautiful Black Hills where she gained a love for the environment at an early age. Her passion has continued to grow throughout her time at Stanford with engaging courses on campus, studying abroad in Australia, and working as the naturalist at Stanford Sierra Camp. Outside of her academics, she can be found hiking, mountain biking, climbing, doing crosswords, or enjoying a nice cup of coffee.
