Raya Bogdanova

Graduate, Medicine, Psychiatry and Behavioral Sciences

Bio

BIO

Raya Bogdanova joins the BRIDGE Lab as a Fulbright visiting student researcher from KU Leuven, where she is completing her Master of Medicine degree. With a long-standing interest in neurocognitive, developmental, and degenerative disorders, she has contributed to research in Alzheimer's disease, Multiple Sclerosis, and gestational diabetes. Her current work focuses on ADHD-related brain signatures in children with RASopathies.

Passionate about student wellbeing, Raya also lead the ADHD peer support network at KU Leuven, bridging her clinical interests with community engagement. Outside the lab, she enjoys swimming, hiking, and exploring art museums in new cities.
