

Natalia Gomez-Ospina

Assistant Professor of Pediatrics (Genetics)

Pediatrics - Medical Genetics

CLINICAL OFFICE (PRIMARY)

- **Medical Genetics**

300 Pasteur Dr Rm A097

MC 5208

Stanford, CA 94305

Tel (650) 723-6858 **Fax** (650) 498-4555

Bio

BIO

Dr. Gomez-Ospina was born and raised in Medellin, Colombia. She began her undergraduate studies in petroleum engineering at the Universidad Nacional de Colombia before moving to Colorado. She double majored at the University of Colorado Boulder, completing her bachelor's degree in Molecular Cellular and Developmental Biology as well as Biochemistry. She graduated summa cum laude and wrote an honors thesis entitled "Role of the quiescent center in the regeneration of the root cap in *Zea Mays*." She then completed her combined MD, PhD at Stanford Medical School, where her PhD work focused on understanding the novel functions of voltage-gated calcium channels. Her PhD thesis, "The calcium channel CACNA1C gene: multiple proteins, diverse functions," was published in *Cell*. After completion of her dual degrees, she did her preliminary year in internal medicine at Santa Barbara Cottage hospital before starting residency in Dermatology at Johns Hopkins Hospital. She completed residency in Medical Genetics at Stanford Hospital and clinics.

Her post-doctoral research was with Dr. Matthew Porteus in Pediatric Stem Cell transplantation, where she began to develop genome editing-based strategies in stem cells as a therapies for metabolic diseases. She is currently an Assistant Professor in the Department of Pediatrics. For her clinical practice she sees patients with suspected genetic disorders, and is also in charge of the enzyme replacement service for lysosomal storage disorders at Lucile Packard Children's hospital. She has been the lead author in research studies in *The New England Journal of Medicine*, *Cell*, *Nature Communications*, and *American Journal of Medical Genetics*.

CLINICAL FOCUS

- Rare diseases
- Lysosomal Storage Diseases
- Hematopoietic Stem Cell Transplantation for Metabolic Diseases
- Clinical Genetics and Genomics

ACADEMIC APPOINTMENTS

- Assistant Professor, Pediatrics - Medical Genetics

- Member, Bio-X
- Member, Institute for Stem Cell Biology and Regenerative Medicine
- Member, Maternal & Child Health Research Institute (MCHRI)
- Member, Wu Tsai Neurosciences Institute

HONORS AND AWARDS

- Michael S. Watson Genetic and Genomic Medicine Innovation Award, American College of Medical Genetics (ACMG) (2024)
- Tashia and John Morgridge Endowed Faculty Scholar in Pediatric Translational Medicine, Maternal & Child Health Research Institute Scholar (2023)
- Science Diversity Leadership Award, Chan Zuckerberg Initiative (CZI) (2022)
- Outstanding New Investigator Award, American Society for Cell and Gene Therapy (ASGCT) (2021)
- Rosalind Franklin Medal Award Winner, Genome Writers Guild and Rosalind Franklin Society (2021)
- Young Scientist Award, American Society for Clinical Investigation (ASCI) (2021)
- Award for Research by a Young Investigator, Western Society for Pediatric Research (WSPR) (2020)
- William K. Bowes Jr. Award in Medical Genetics, Partners HealthCare Personalized Medicine (2019)
- Young Investigator Award, 14th annual WORLDSymposium on lysosomal storage diseases (2018)
- Mentored Clinical Scientist Research Career Development Award (K08), NIH, National Institute of Neurological Diseases and Stroke (2017-2022)
- Center of Excellence in Diversity in Medical Education Fellowship, Center of Excellence in Diversity in Medical Education (COEDME), Stanford Medicine (2016)
- Tashia and John Morgridge Endowed Postdoctoral Fellow in Pediatric Translational Medicine, Child Health Research Institute (2015-2016)
- Mead Johnson Award. Novel form of neonatal cholestasis due to mutations in FXR, Western Society of Pediatric Research. Carmel, CA (2015)
- Mead Johnson Award. Respiratory involvement in Costello syndrome, Western Society of Pediatric Research. Carmel, CA (2014)

PROFESSIONAL EDUCATION

- Board Certification: Clinical Genetics and Genomics, American Board of Medical Genetics and Genomics (2015)
- Residency: Stanford Hospital and Clinics (2015) CA
- Residency: Johns Hopkins Hospital (2013) MD
- Internship: Santa Barbara Cottage Hospital (2012) CA
- Ph.D., Stanford School of Medicine, Chemical and Systems Biology (2011)
- Medical Education: Stanford University Medical School (2011) CA

COMMUNITY AND INTERNATIONAL WORK

- Fiesta Educativa, Mayfair Community Center, San Jose

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

Dr. Gomez-Ospina is a physician scientist and medical geneticist with a strong interest in the diagnosis and management of genetic diseases.

- 1) Lysosomal storage diseases:

Her research program is on developing better therapies for a large class of neurodegenerative diseases in children known as lysosomal storage disorders. Her current focus is on developing genome editing of hematopoietic stem cells as a therapeutic approach for these diseases beginning with Mucopolysaccharidosis type 1 and Gaucher disease. She established a genetic approach where therapeutic proteins can be targeted to a single well-characterized place in the genome known as a safe harbor. This approach constitutes a flexible, "one size fits all" approach that is independent of specific genes and mutations. This strategy, in which the hematopoietic system is commandeered to express and deliver therapeutic proteins to the brain can potentially change the current approaches to treating childhood neurodegenerative diseases and pave the way for alternative therapies for adult neurodegenerative disorders such as Alzheimer's and Parkinson's disease

2) Point of care ammonia testing

She also works in collaboration with other researchers at Stanford to develop point-of-care testing for serum ammonia levels. Such device will greatly improve the quality of life of children and families with metabolic disorders with hyperammonemia.

3) Gene discovery

Dr Gomez-Ospina lead a multi-institutional collaboration resulting in the discovery of a novel genetic cause of neonatal and infantile cholestatic liver disease. She collaborated in the description of two novel neurologic syndromes caused by mutations in DYRK1 and CHD4.
