Stanford

Felipe Dias

Adjunct Clinical Assistant Professor, Pediatrics - Immunology

Bio

BIO

My research interest at Stanford is focused on understanding immune-behavioral health conditions, in particular PANS (Pediatric Acute-onset Neuropsychiatric Syndromes). I am also Associate Professor in the Department of Sociology at Tufts University. I am a Co-Investigator on a project funded by the National Institutes of Health (NIH R0 Grant Number 1R01MH136641-01) along with Lisa Shin, Sam Sommers, and Aerielle Allen (Co-Principal Investigators) seeking to examine brain, physiological, and psychological responses to the recollection of specific personal experiences with racism. My research has appeared in the American Journal of Sociology, Research in Social Stratification and Mobility, International Migration Review, Socius: Sociological Research for a Dynamic World, Sociology of Race and Ethnicity, and Comparative Sociology.
