

Xiaojing Gao

Assistant Professor of Chemical Engineering

Bio

BIO

How do we design biological systems as “smart medicine” that sense patients’ states, process the information, and respond accordingly? To realize this vision, we engineer towards a “simple” goal: producing specific proteins in the right cells at the right time. There is an inspiring history of such methods transforming basic research (e.g., dissecting neural circuits) and biomedicine (e.g., ablating cancer), yet they remain inadequate in many scenarios, especially in organisms (including human patients) where it is possible but nontrivial to introduce polynucleotides.

We envision pushing the envelope by focusing on a hitherto under-explored aspect: controllers compatible with RNA delivery. We expect such controllers to leverage the safety features of mRNA vectors and the post-pandemic burst of research activities, offer additional benefits such as robust performance and compact delivery, and synergize with conventional DNA-level control to further enhance the precision of payload production. Knowing that the controllers are fundamentally confined by the cells they operate in, rather than dealing with the impossible task of completely insulating the controllers from the biological contexts, our philosophy is to incorporate biology as design features (e.g., endogenous retention mechanism in the protein secretory pathway and housekeeping RNA-editing enzymes), leading to innovation in three areas. First, we are developing a plug-and-play platform based on engineered viral proteases to process signals and control intercellular communications. Second, we are co-opting RNA editing to create programmable modular sensors for transcript markers that represent cell types/states and ligands that represent extracellular environments. Third, considering the immunogenic risk of components sourced from non-human organisms, we are “humanizing” the controllers by using human domains and then further computationally reducing their potential immunogenicity. We identified two proof-of-principle applications, non-invasive early disease detection and mRNA-mediated engineering of therapeutic cells, and are dedicating our efforts to applying our controllers to them.

ACADEMIC APPOINTMENTS

- Assistant Professor, Chemical Engineering
- Member, Bio-X
- Member, Wu Tsai Human Performance Alliance
- Faculty Fellow, Sarafan ChEM-H
- Member, Stanford Cancer Institute
- Member, Wu Tsai Neurosciences Institute

HONORS AND AWARDS

- Prize for Innovation, BioInnovation Institute & Science (2025)
- Rising Star Award, BMES CMBE (2024)

- New Innovator Award (DP2), National Institutes of Health/NIBIB (2023-2028)
- Finalist, Freeman Hrabowski Scholars, HHMI (2023)
- Trailblazer Award (R21), National Institutes of Health/NIBIB (2022-2025)
- NARSAD Young Investigator Grant, Brain & Behavior Research Foundation (2022-2024)
- 35 under 35, China, MIT Tech Review (2021)
- Terman Faculty Fellow, Stanford University (2020-2023)
- Pathway to Independence Award (K99/R00), National Institutes of Health (2019-2023)
- DARPA Riser, DARPA's 60th Anniversary Symposium (2018)
- HHWF Postdoctoral Fellowship, Helen Hay Whitney Foundation-HHMI (2016-2019)
- Enlight Foundation/Bio-X Interdisciplinary Fellowship, Stanford University (2012-2015)

BOARDS, ADVISORY COMMITTEES, PROFESSIONAL ORGANIZATIONS

- Early Career Board, ACS Synthetic biology (2024 - present)
- Member, Engineering Biology Research Consortium (2021 - present)

PROGRAM AFFILIATIONS

- Stanford SystemX Alliance

PROFESSIONAL EDUCATION

- Postdoctoral Fellow, California Institute of Technology , Biology and Biological Engineering (2020)
- Ph.D., Stanford University , Biology (2015)
- B.S., Peking University , Biology (2009)

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

How do we design biological systems as “smart medicine” that sense patients’ states, process the information, and respond accordingly? To realize this vision, we will tackle fundamental challenges across different levels of complexity, such as (1) protein components that minimize their crosstalk with human cells and immunogenicity, (2) biomolecular circuits that function robustly in different cells and are easy to deliver, (3) multicellular consortia that communicate through scalable channels, and (4) therapeutic modules that interface with physiological inputs/outputs. Our engineering targets include biomolecules, molecular circuits, viruses, and cells, and our approach combines quantitative experimental analysis with computational simulation. The molecular tools we build will be applied to diverse fields such as neurobiology and cancer therapy.

Teaching

COURSES

2025-26

- A Synthetic Menagerie: Why and How We Emulate Nature and Tinker with Animals: CHEMENG 467 (Spr)
- Chemical Kinetics and Reaction Engineering: CHEMENG 320 (Win)
- Graduate Practical Training: CHEMENG 299 (Sum)
- Introduction to kinetics and reactor design: CHEMENG 130B (Aut)

2024-25

- Chemical Kinetics and Reaction Engineering: CHEMENG 320 (Win)
- Introduction to kinetics and reactor design: CHEMENG 130B (Aut)

2023-24

- Chemical Kinetics and Reaction Engineering: CHEMENG 320 (Win)
- Colloquium: CHEMENG 699 (Aut, Win, Spr)
- Introduction to kinetics and reactor design: CHEMENG 130B (Aut)

2022-23

- Chemical Kinetics and Reaction Engineering: CHEMENG 320 (Spr)
- Colloquium: CHEMENG 699 (Aut, Win, Spr)
- Introduction to kinetics and reactor design: CHEMENG 130B (Aut)

STANFORD ADVISEES

Doctoral Dissertation Reader (AC)

Peter Allen, Julisia Chau, Matt DeJong, Jeandele Elliot, Izzi Gengaro, Yulin Huang, Salvador Moncayo von Hase, Kennedy Outlaw, John Shin, Talal Widatalla, Brendan Wirtz, Junhao Xu, Spencer Zhao

Postdoctoral Faculty Sponsor

Unyime Effiong, Yulai Liu, Meng Zhang

Doctoral Dissertation Advisor (AC)

Connie An, Connor Call, Haoyu Dai, Yixin Hu, Hank Jones, Santiago Mille Fragoso, Jean Sebastien Paul, Xiaowei Zhang

Doctoral Dissertation Co-Advisor (AC)

Kelcey Allen, Wyatt Blackson, Christian Otero, Duo Sun, Jocelyn Valenzuela, Pengli Wang, Grace Yang

GRADUATE AND FELLOWSHIP PROGRAM AFFILIATIONS

- Biophysics (Phd Program)
- Cancer Biology (Phd Program)
- Neurosciences (Phd Program)
