Excellence and compassion in patient care is the bedrock of my clinical practice. Every person has a unique story. Every person has experienced health and illness through their own lens. I want to listen, and learn about you. Together, we can develop a personalized tailored approach to your diagnosis, prevention and treatment – using the best of medical science, in a manner that is consistent with your values and your needs.

Over the years, I’ve been fortunate enough to teach medical students, residents and faculty around the world. I have held leadership roles in medical schools and professional societies. I’ve even been a medical journal editor. I’ve developed patient centered communication curricula for medical students and residents, and have taught leadership courses for faculty. Finally, I have lead projects in health technologies.

As an internal medicine physician, I love taking care of my patients – from preventing illness to treating the most complex of diseases for adults. I have special interests in mindful practice, and in using the best of health technologies to optimize your health. I hope that we have a chance to work together.
