

Linda K. Ottoboni, PhD, CNS

Clinical Assistant Professor, Medicine - Primary Care and Population Health

CLINICAL OFFICE (PRIMARY)

- **Stanford Health Care Cardiac Arrhythmia Service**

300 Pasteur Dr Rm A23

MC 5335

Stanford, CA 94305

Tel (650) 723-7111 Fax (650) 721-5747

Bio

BIO

Linda K. Ottoboni, PhD, CNS is a member of the Stanford Arrhythmia and Electrophysiology Service and her present work is focused on the patient's response to arrhythmias. Her research area and clinical expertise are focused on improving the experience of individuals who live with arrhythmias and cardiovascular risk factor reduction.

CLINICAL FOCUS

- Atrial Fibrillation - Comprehensive Approach to Management
- Cardiovascular Arrhythmias- Prevention and Symptom Management
- Clinical Nurse Specialist

ACADEMIC APPOINTMENTS

- Clinical Assistant Professor, Medicine - Primary Care and Population Health

HONORS AND AWARDS

- Fellow, Heart Rhythm Society (2010)

BOARDS, ADVISORY COMMITTEES, PROFESSIONAL ORGANIZATIONS

- Cardiac Device Certification Exam Item Writing Committee, Heart Rhythm Society (2017 - present)
- Scientific Writing Committee, Heart Rhythm Society (2023 - present)

PROFESSIONAL EDUCATION

- PhD, University of California, San Francisco , School of Nursing (2017)
- Board Certification: Clinical Nurse Specialist, American Association of Critical Care Nurses (2015)
- Board Certification: Clinical Nurse Specialist, International Board of Heart Rhythm Examiners (2005)
- Masters, University of California San Francisco , Cardiovascular Clinical Nurse Specialist, Physiological Nursing (1987)

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

My early qualitative work was to determine how individual's experience their lives with atrial fibrillation (AFib). It validated that managing the presence or absence of their cardiac arrhythmia was inadequate and resources/strategies were needed to enable them to live life fully with their arrhythmia. This work provided the foundation for the development of a conceptual model to advance the science of supporting individuals to achieve an optimal quality of life with AFib. I am working collaboratively with other AFib nurse scientists on the development of a conceptual model.

My continued interest in the clinical and psychological outcomes of individuals with Implantable Cardioverter Defibrillators (ICDs) prompted the design and implementation of a longitudinal data base for ICD patients at Stanford to examine associations between activity, cardiovascular status, and patient reported outcomes (Quality of Life, Anxiety, and Depression) in individuals with ICDs: ACPRO-ICD. The aims of the study are to learn more about the challenges of living with an ICD and identify those resources perceived as supportive that are provided or desired.

CLINICAL TRIALS

- Feasibility Study to Improve AF Outcomes Using a Digital Application for CV Risk Reduction, Not Recruiting
- Meditation and Education That is Nurse Delivered for Symptom Management in Paroxysmal Atrial Fibrillation (PAF), Not Recruiting
