### Bio

---

### ACADEMIC APPOINTMENTS

- Associate Professor, Neurosurgery
- Member, Bio-X
- Member, Maternal & Child Health Research Institute (MCHRI)
- Faculty Fellow, Sarafan ChEM-H
- Member, Wu Tsai Neurosciences Institute

### ADMINISTRATIVE APPOINTMENTS

- Associate Professor, Stanford University School of Medicine, (2019- present)
- Assistant Professor, Stanford University School of Medicine, (2012-2019)

### HONORS AND AWARDS

- McCormick and Gabilan Faculty Award, Stanford University (2018-2020)
- Parkinson's seed grant, Stanford (2018-2019)
- The Archer Award, The Archer Foundation (2016-2018)
- Biology V, California Institute of Regenerative Medicine (2014-2017)
- Mechanisms of Illness, Chronic Fatigue Initiative (2014-2015)
- Klingenstein Fellowship in Neuroscience, Klingenstein Foundation (2013-2018)
- Michael J. Fox Foundation Grant Target Validation Spring 2013, Michael J. Fox Foundation (2013-2014)
- Gabilan Junior Faculty Fellow, Stanford University (2012-now)
- Alfred P. Sloan Research Fellow 2012, Alfred P. Sloan Foundation (2012-2016)
- William and Bernice E Bumpus Foundation Innovation Award, William and Bernice E Bumpus Foundation (2011-2014)
- NIH Pathway to Independence (K99/R00), NINDS (2009-2014)

## PROFESSIONAL EDUCATION

- Ph.D, University of Cambridge , Genetics, Neurobiology (2007)
- M.D/MSc., China Medical University , Clinical Medicine and Genetics (2003)

## PATENTS

- Xinnan Wang. "United States Patent 23-1115-US-PRO Compositions and methods for treating glioblastoma", Stanford University
- Xinnan Wang. "United States Patent AU2020343009A1 Methods and compounds modifying mitochondrial function", Stanford University
- Xinnan Wang. "United States Patent US2022/041930 A Small Molecule Therapeutic for Friedreich's Ataxia and Tauopathy", Stanford University
- Xinnan Wang. "United States Patent US63/228,505 T-Type Calcium Channel Antagonists and Uses Thereof", Stanford University
- Xinnan Wang. "United States Patent WO2021046322A1 A small molecule therapeutic for Parkinson's disease paired with a biomarker of therapeutic activity", Stanford University

### CURRENT RESEARCH AND SCHOLARLY INTERESTS

Mitochondria move and undergo fission and fusion in all eukaryotic cells. The accurate allocation of mitochondria in neurons is particularly critical due to the significance of mitochondria for ATP supply, Ca++ homeostasis and apoptosis and the importance of these functions to the distal extremities of neurons. In addition, defective mitochondria, which can be highly deleterious to a cell because of their output of reactive oxygen species, need to be repaired by fusing with healthy mitochondria or cleared from the cell. Thus mitochondrial cell biology poses critical questions for all cells, but especially for neurons: how the cell sets up an adequate distribution of the organelle; how it sustains mitochondria in the periphery; and how mitochondria are removed after damage. The goal of my research is to understand the regulatory mechanisms controlling mitochondrial dynamics and function and the mechanisms by which even subtle perturbations of these processes may contribute to neurodegenerative disorders.
