George Duran

Cancer Biologist and Laboratory Manager, Medicine - Med/Oncology

Bio

CURRENT ROLE AT STANFORD

Cancer biologist specializing in the development of novel chemotherapeutic agents and in mechanisms of drug resistance. Current research ranges from molecular studies to further understand the heterogeneity of T-cell lymphomas, to translational studies of molecular determinants of therapeutic response, and clinical trials that use the body's immune system to fight cancer cells.

Original research contributions have resulted in the authorship of over eighty publications.
