Bio

BIO

I have worked over the last 10 years to build a foundation for a career in academic infectious diseases by providing thoughtful dedicated care for my patients, conducting clinically focused research, and remaining an engaged educator for developing physicians. My passion for the study of infectious diseases has led me to complete a general infectious diseases fellowship and additional focused training in transplant and immunocompromised infectious diseases. I will continue to work diligently with my colleagues focusing on the growth of medical learners, advancing patient centered clinical research, and striving to provide the highest quality of care to patients.
