Bio

BIO

Britni Wilcher, PhD, is a Visiting Scholar in the Department of Health Policy at Stanford University and an applied microeconomist working at the intersection of health, labor, and gender economics. Dr. Wilcher's research focuses on the economics of health decision making and its implications for labor markets using quasi-experimental designs. Her research portfolio spans vulnerable populations and policy interventions, from evaluating teletherapy adoption patterns among 200,000+ veterans to conducting regulatory impact analyses protecting 22+ million workers nationwide. Her collaborative research products have withstood judicial review up to the Supreme Court and provided evidence-based input into policy actions. Her work has been cited in congressional testimony and the 2022 Economic Report of the President. It has been featured in federal regulations and published in peer-reviewed journals including Labour Economics, Health Economics, Value in Health, and the International Journal of Technology Assessment in Health Care.

Dr. Wilcher has worked in management consulting, government, universities, and has consulted with think tanks, foundations, the EU Commission, and a United Nations entity. She holds a PhD in Economics from American University, an MSc in International Health Care Management, Economics, and Policy from SDA Bocconi School of Management, and a BA in Economics from Spelman College.
