#### CURRENT RESEARCH AND SCHOLARLY INTERESTS

I am the Director of the Research Autopsy Collaboration at Stanford (RACS) to collect organs and tissues from decedent donors for cancer and disease research. <https://med.stanford.edu/racs>

I have a number of research interests associated with my autopsy work, including how the time interval between death and collection (the PMI) affects the condition and research viability of the collected tissue, how valuable blood and tissue cultures behave after death, and how autopsy results affect

clinical practice in an established information loop. I have projects exploring physician and family attitudes towards autopsy and the utilization of rapid autopsy tissue in characterizing cancer evolution from genetic and immunologic standpoints.
