Bio

CURRENT ROLE AT STANFORD

Don Mitchell is the Director of the Academic Application Services (AAS) team in TDS. The AAS team focuses on the creation, integration, and deployment of web-based solutions for the Stanford University School of Medicine. We make use of a variety of hardware, software, and cloud technologies and partner closely with teams across TDS, the School of Medicine, and the University. We manage development, testing, and production environments, perform process mappings, set architecture standards, and provide consultations to teams looking to do software development or use SaaS solutions.

AAS' vision is to empower staff, faculty, and students with the integrated information, solutions, and IT resources needed to be successful and to support best-in-class administrative processes across the research and education missions.
