Bio

CURRENT ROLE AT STANFORD
SNI serves as the interdisciplinary focal point for the faculty, who are working to unlock the secrets of the brain, including faculty members in neurosciences, applied physics, biology, chemistry, engineering, neurology, neurosurgery, psychiatry, psychology and statistics. Program developed by the institute will enhance interdisciplinary research related to the neurosciences by fostering interactions between faculty from diverse disciplines to pursue innovative research initiatives, by supporting the events to share knowledge, generate collaboration and foster innovation.

As the SNI Program Manager, responsible for the establishment, organization and management of major Neurosciences Institute programs that promote interdisciplinary neuroscience research an neuroscience education at Stanford. Also responsible for creating and delivering communications to the SNI community, the broader Stanford community, and the general public via email, web and print media.
