Brendon A Bullard

Research Assoc-Experimental, Fundamental Physics Directorate

Bio

BIO

I am a postdoc in the SLAC ATLAS group working on measurements of top quarks and searches for Di-Higgs production. I am also working on the data acquisition system for the ITk pixel detector upgrade and feasibility studies for the Cool Copper Collider concept. Aside from my research interests, I am an active member of the SLAC outreach community - please do not hesitate to get in touch by email, especially if you are a student.
