

Neetu Saini

Postdoctoral Scholar, Stem Cell Transplantation

Bio

BIO

My research interests focus on translational human T-cell immunology, with an emphasis on regulatory T cells (Tregs) and their therapeutic potential in restoring immune tolerance and tissue homeostasis. I am particularly interested in engineering FOXP3-programmed CD4⁺ T cells as a stable and functional alternative to conventional Tregs, especially in inflammatory settings where endogenous Tregs may be unstable or dysfunctional. My work integrates gene-editing approaches, immunophenotyping, and human organoid systems to study how these engineered cells interact with epithelial and stem cell compartments, with a focus on mechanisms of tissue repair and immune–epithelial crosstalk in barrier tissues such as the intestine. Moving forward, I aim to advance next-generation cell therapies by combining insights from T-cell biology, tissue biology, and disease modeling to develop durable and clinically relevant strategies for treating immune-mediated and epithelial barrier disorders.

INSTITUTE AFFILIATIONS

- Member, Maternal & Child Health Research Institute (MCHRI)

HONORS AND AWARDS

- Maternal & Child Health Research Institute (MCHRI) Postdoctoral Fellow, ,

PROFESSIONAL EDUCATION

- PhD, Institute For Stem Cell Science and Regenerative Medicine (Instem-DBT) , Regulation of cell signalling (2022)
- Master Of Science, University of Delhi , Biochemistry (2013)
- Bachelor of Science, University of Delhi , Biochemistry (2011)

STANFORD ADVISORS

- Rosa Bacchetta, Postdoctoral Faculty Sponsor
