#### BIO

I am a Clinical Assistant Professor and oncology hospitalist in the Division of Hospital Medicine at Stanford University School of Medicine. I care for patients with solid tumors admitted with complex, high-acuity conditions, including cancer-related complications, treatment toxicities, infections, malnutrition, and end-of-life care, making complex clinical decisions and navigating high-stakes situations with patients and families, often integrating input from multiple consulting teams.

I received my Doctor of Medicine degree summa cum laude from Novosibirsk State Medical University and completed a two-year rheumatology fellowship in Russia, a specialty defined by multiorgan complexity and the search for systemic connections. I later moved to the United States, where I completed an internal medicine residency at Ascension Saint Francis Hospital in Evanston, IL. During residency, I was named Intern of the Year, received the Great Catch Award for identifying and correcting a patient care error, served as Chief Resident in my third year, and contributed to over 20 publications, half as first author.

My early training in rheumatology, a field centered on systemic disease and pattern recognition, continues to shape how I approach complex illness and informs my interest in integrative medicine. In my current practice, I already incorporate elements of integrative medicine by considering lifestyle, behavioral, and psychosocial factors alongside medical management when caring for complex patients. My current academic interest centers on bringing evidence-based integrative medicine into the inpatient oncology setting. I was recently awarded a Stanford SMART-HM grant to pursue formal training in integrative medicine and to develop a care model that addresses the needs of hospitalized oncology patients beyond disease-directed treatment, including symptom burden and psychological distress. My long-term aim is to expand this approach to broader hospitalized populations while improving patient experience and clinical outcomes.
