Bio

BIO

Valerie Meausoone is currently a Research Data Architect and Consultant at the Stanford Research Computing Center. Mrs. Meausoone has been one of the early users and testers of a computing environment for the distribution and use of high-risk and population-health related datasets at Stanford. She has also participated in efforts to expand the current Observational Medical Outcomes Partnership (OMOP) Common Data Model to administrative non-health related datasets, allowing researchers to share code on datasets. Mrs. Meausoone has recently completed various analyses aimed at leveraging existing data to better study the relationship between social constructs, such as gender norms and women's economic empowerment, and health.
