

Frederik Wild

Postdoctoral Fellow, Medicine - Primary Care and Population Health

Bio

BIO

I am a postdoctoral researcher at Stanford University (Geldsetzer Lab) and the Heidelberg Institute of Global Health (Germany).

In my research, I apply micro-econometric methods, specifically quasi-experimental designs, to study how policy interventions and external shocks shape health, human capital, and socioeconomic outcomes. I particularly enjoy investigating large-scale datasets as well as geospatial data.

Further information on my work is available on my personal webpage at: www.frederikwild.com
