Stanford

Peng Zhang

Visiting Postdoctoral Scholar, Cardiovascular Institute Operations

Bio

BIO

I am a visiting postdoctoral scholar at Stanford University, specializing in Dr. Nguyen's lab. I am a PhD in Integrative Medicine with research focus on elucidating the molecular and cellular mechanisms underlying immune-metabolic disorders, including but not limited to cardiovascular diseases, bone diseases, and autoimmune diseases. My work integrates traditional Chinese medicine (TCM) theories with modern biomedical approaches, employing techniques such as multi-omics analysis, network pharmacology, and in vivo/in vitro disease modeling to explore novel therapeutic strategies and biomarker discovery.
