Bio

CURRENT ROLE AT STANFORD

Michael McAuliffe is a program manager with Stanford Health Care's Office of Program Management & IT Governance. Michael's primary program management client is the Stanford Medicine Educational Technology team. He manages the team's technology and media production portfolio and provides project management for online course production. Michael manages the team's workload projection and cost recovery tools, while also serving as administrator for Stanford Medicine's lecture capture and media delivery system.

Michael served as Director of the Educational Technology team until 2015, at which point he transitioned to a 100% remote role working with Stanford Medicine while living with his family in Vermont.

Prior to joining Stanford Medicine in 2012, Michael was the director of IT Academic Services at Texas Wesleyan University. In this role, Michael served as lead project manager and as the primary liaison between the Information Technology unit and Academic leadership at Texas Wesleyan. Michael’s perspective on the use of multimedia in education also reflects his experience as an instructional designer with MLink Technologies, during which he designed and oversaw the development of training curriculum and learning tools for a select group of Fortune 100 clients.

Michael is a graduate of the Stanford Management Academy (2015) and the Educause Institute Management Program (2011), as well as a member of Educause, the Association of American Medical Colleges, and the Western Group on Educational Affairs. Michael completed the Prosci Change Management Practitioner course in Winter 2024.
