Talya Shragai

- Staff, Biology
- Special Initiatives Manager, Disease Ecology In A Changing World, Human and Planetary Health

Bio

BIO

Talya is the Research and Program Manager for the Disease Ecology in a Changing World program where she works on projects that improve both human health and the health of the environment.

She earned her PhD in Medical Entomology at Cornell University, studying how mosquitos adapt and behave in novel environments in Colombia, Puerto Rico, and New York. Following her PhD, Talya worked at the Centers for Disease Control and Prevention in the Global Emergency Public Health and Global Immunization programs. Her work at the CDC combined capacity building, operational research, and collaborating with Ministries of Health across Africa, Latin America, and Asia to improve outbreak response and vaccine coverage around the world.

Talya is passionate about research that provides innovative, practical solutions to improve health.
