

Samuel Enrique Camacho

Masters Student in Civil and Environmental Engineering, admitted Autumn 2025

Bio

BIO

Native of Maracaibo, Venezuela. I am a nonprofit leader, a graduate research assistant, a perennial intern, and a recovering investment banker.

After working in banking and helping early-stage startups in the sustainability space navigate funding rounds, I decided to pursue graduate studies in environmental engineering to expand my technical foundation in sustainability and renewable energy technology.

My previous research focused on traditional energy, and I have presented at over 10 economic conferences. I have also interned at a YC-backed startup, in consulting, banking, venture capital, corporate, and various nonprofits and universities. In my spare time, I co-lead a Latin American education and arts nonprofit in Houston. Other interests include worrying about Venezuelan inflation, visiting small towns in the U.S., coding in Stata, and hiking.
