

Anas Alharbi

Masters Student in Civil and Environmental Engineering, admitted Autumn 2025

Bio

BIO

I'm a graduate international student in the Civil and Environmental Engineering (Atmosphere/Energy) program at Stanford University, with a background in Chemical Engineering. My interests sit at the intersection of sustainability, energy systems, and data-driven decision-making.

In my professional career, I have managed projects that required both technical depth and business judgment. My work often involves data analysis to evaluate projects from technical and financial perspectives and turn results into clear recommendations for decision-makers.

I also hold an MBA and I'm a CFA Charterholder. I'm especially interested in decarbonization strategy, environmental performance, and energy/climate finance.

Outside of class, I enjoy all kinds of physical activities, even though I'm still a beginner.
