Affiliate, Earth System Science

Bio

BIO

I recently completed a postdoctoral fellowship at the University of Helsinki, where I honed my expertise in Geoinformatics and remote sensing. My work focuses on using cutting-edge satellite and airborne sensor data, combined with advanced spatial analysis and machine learning, to better understand and mitigate environmental challenges such as climate change, land-use transformation, and biodiversity decline. Passionate about bridging technology and ecology, I collaborate across disciplines to translate geospatial insights into actionable solutions for sustainable resource management and conservation.
