#### BIO

Dr. Serena Yang-Loudin is a board-certified urologist. She is also a clinical assistant professor in the Department of Urology at Stanford University School of Medicine.

Dr. Yang-Loudin diagnoses and treats the full spectrum of urologic conditions, such as enlarged prostate (benign prostatic hyperplasia), kidney stones, incontinence, sexual dysfunction, infertility, and urologic oncology. She feels that urology is a highly personal specialty and that it is a privilege to help each patient with their concerns. Her goal is to assist each of her patients in finding a treatment solution that aligns with their needs.

Dr. Yang-Loudin's research interests include the impact of smoking and BMI on semen after reversing a vasectomy (vasovasostomy), somatic growth in pediatric patients after a surgical procedure (pyeloplasty) to remove a blockage where the kidney meets the ureter (ureteropelvic junction), and the effectiveness of verapamil injections to treat severe Peyronie's disease.

She has presented her research at international, national, and regional meetings, including those of the International Society for Sexual Medicine, Northwest Urological Society, and Western Section of the American Urological Association.

Dr. Yang-Loudin is a member of the American Urological Association (AUA) and the Society of Women in Urology (SWIU).
