Bio

BIO

Kate Shen is a Project Research Scientist whose work spans plant biology and cancer cell biology. Her research involves experimental studies using plant systems alongside human HeLa cancer cells, reflecting an interdisciplinary approach to understanding fundamental biological processes across kingdoms. She contributes to the design, execution, and analysis of laboratory experiments, supporting ongoing research initiatives through data collection and interpretation, and collaborating with the research team. Her work integrates molecular and cellular techniques to address questions relevant to both basic and applied biological research.
