Bio

BIO

A strategy and operations leader working at the intersection of technology, talent, and impact. I am passionate about building and scaling tech-enabled platforms that connect professionals from emerging economies with the growing global demand for expertise to train and advance complex artificial intelligence and machine learning systems.

As Director of Generative AI Operations at Hugo, I led teams delivering machine learning initiatives for global technology companies such as Meta and Google. Our work enhances AI systems through large-scale data annotation, quality evaluation, and human review processes that ensure accuracy, fairness, and high performance.

Outside of work, I am a husband and father, a Vassar College and LSE alum, and someone who enjoys trying new restaurants, snorkeling on beach holidays, hiking, and taking my young son on new adventures such as his first trip to the ocean or spotting wildlife national parks.
