Stanford

Ansel Austin Wong

Undergraduate, Vice Provost for Undergraduate Education

Bio

BIO

I am an undergraduate student seeking to pursue a bioengineering major on a pre-med track (with an end goal of becoming a physiatrist). I have participated in independent research in polyphenols and their importance in regulating UV damage. My other interests include nanotechnology, AI-biology compatibility, and prosthetics, though I would love the experience to delve into any field. I also have clinical experience as a hospital volunteer and community health organizer. In my free time, I love playing the piano and writing music.
