Stanford

John P. Statz

Postdoctoral Scholar, Developmental Biology

Bio

BIO

I am fascinated by many aspects of our world and grateful to have a chance to poke around and see how some of it works. Born and raised in Minnesota, first generation college student. A genetics course late in my undergraduate studies set me on the path toward scientific research, and I hope to inspire that same curiosity in the next generation. My research interests center on genetics, development, reproduction, evolution, and the interactions between animals and microbes. Outside of the lab, I spend most of my time with daughter and wife, cooking and baking, walking in nature, and biking around town.

PROFESSIONAL EDUCATION

- Doctor of Philosophy, University of Montana (2026)
- Bachelor of Science, University of Minnesota Duluth (2016)
- BS, University of Minnesota - Duluth , Biology (2016)
- PhD, University of Montana , Cellular, Molecular, and Microbial Biology (2026)
