

John Paul Statz

Postdoctoral Scholar, Developmental Biology

Bio

BIO

I am fascinated by many aspects of our world, grateful to have a chance to poke around and see how some of it works. Born and raised in Minnesota, first generation college student. A genetics course late in my undergraduate studies set me on the path toward scientific research, and I hope to help inspire that same curiosity in the next generation. My research interests center on genetics, development, reproduction, and the interactions between animals and microbes. Outside of the lab, I spend most of my time with daughter and wife, cooking and baking, walking in nature, and biking around town.
