Bio

BIO

Carl Wieman holds a joint appointment as Professor of Physics and of the Graduate School of Education. He has done extensive experimental research in atomic and optical physics. His current intellectual focus is now on undergraduate physics and science education. He has pioneered the use of experimental techniques to evaluate the effectiveness of various teaching strategies for physics and other sciences, and served as Associate Director for Science in the White House Office of Science and Technology Policy.

ACADEMIC APPOINTMENTS

- Emeritus Faculty, Acad Council, Physics
- Member, Wu Tsai Human Performance Alliance

HONORS AND AWARDS

- \$4 M Yidan Prize for Education Research, Yidan Foundation (2020)
- Carnegie US University Professor of the Year, Carnegie Foundation for the Advancement of Teaching (2003)
- Nobel Prize in Physics 2001, Nobel Foundation (2001)

PROFESSIONAL EDUCATION

- Ph.D., Stanford University , Physics (1977)
- B.S., MIT , Physics (1973)

Research & Scholarship

RESEARCH INTERESTS

- Brain and Learning Sciences
- Higher Education
- Science Education
- Teachers and Teaching

CURRENT RESEARCH AND SCHOLARLY INTERESTS

The Wieman group's research generally focuses on the nature of expertise in science and engineering, particularly physics, and how that expertise is best learned, measured, and taught. This involves a range of approaches, including individual cognitive interviews, laboratory experiments, and classroom interventions with controls for comparisons. We are also looking at how different classroom practices impact the attitudes and learning of different demographic groups.

Some current projects include:

1. Investigating problem solving strategies. We are examining the detailed components in problem solving to determine how these combine to achieve problem solving success, and how the strengths and weaknesses of a learners strategy can be measured and then improved. This work involves physics based computer simulations where students decide what information to seek, how to interpret the information they get, and then how they choose to act on that information. The goals of this research are, primarily, to identify which aspects of problem solving strategies pave the way to expertise and how to teach these effectively.

2. Cognitive principles for instructional design

Although current "active learning" efforts have been shown to provide better learning outcomes than traditional instructional methods, there is currently little guidance on how to design such materials to best support learning. We are designing, implementing, and studying instructional materials that take into account findings on human cognition, such as the benefits of inventing from a series of contrasting cases (e.g. Schwartz et al., 2011). By studying the efficacy of these materials, we hope to provide instructors, curriculum developers, and researchers with new principles for designing effective instructional materials for typical classroom instruction. A particular focus at this time is the use and learning of mechanistic reasoning, a fundamental component of physic expertise, as well as many other sciences.

3. The assessment and learning of adaptive medical expertise. Although medical education focuses heavily on mastery factual information and procedures under carefully identified conditions, medical practice takes place in a much less controlled environment. There are many other possibly relevant and irrelevant factors a doctor must take into account. This calls for adaptive expertise, the capability to operate in new contexts and learn new things as needed. We are working on the better assessment of such adaptive expertise and ultimately on the improvement of medical teaching to better teach it.

Teaching

COURSES

2024-25

- Learning & Teaching of Science: CTL 280, EDUC 280, ENGR 295, PHYSICS 295 (Spr)

2023-24

- Mechanics, Concepts, Calculations, and Context: PHYSICS 41E (Win)

2022-23

- Learning & Teaching of Science: CTL 280, EDUC 280, ENGR 295, MED 270, PHYSICS 295 (Spr)
- Scientific Communication in Physics: PHYSICS 191 (Win)

STANFORD ADVISEES

Doctoral Dissertation Reader (AC)

Alessandra Napoli, L'Nard Tufts
