BIO

Londa Schiebinger is the John L. Hinds Professor of History of Science in the History Department at Stanford University and Director of the EU/US Gendered Innovations in Science, Health & Medicine, Engineering, and Environment Project. From 2004-2010, Schiebinger served as the Director of Stanford's Clayman Institute for Gender Research. She is a member of the American Academy of Arts and Sciences.

Professor Schiebinger received her Ph.D. from Harvard University in 1984 and is a leading international authority on gender in science and technology. Over the past thirty years, Schiebinger's work has been devoted to teasing apart three analytically distinct but interlocking pieces of the gender and science puzzle: the history of women's participation in science; gender in the structure of scientific institutions; and the gendering of human knowledge.

Londa Schiebinger presented the keynote address and wrote the conceptual background paper for the United Nations' Expert Group Meeting on Gender, Science, and Technology, September 2010 in Paris. She presented the findings at the United Nations in New York, February 2011 with an update spring 2014. In 2022, she prepared the background paper for the United Nations 67th session of the Commission on the Status of Women’s priority theme, Innovation and Technological Change, and Education in the Digital Age for Achieving Gender Equality and The Empowerment of all Women and Girls. Since 2023, Gendered Innovations has been a member of the UNFPA Equity 2030 Alliance.

In 2011-2014, Schiebinger entered into major collaborations with the European Commission and the U.S. National Science Foundation to promote Gendered Innovations in Science, Health & Medicine, Engineering, and Environment. This project draws experts from across the U.S., Europe, Canada, and Asia, and was presented at the European Parliament, July 2013 as Gendered Innovations: How Gender Analysis Contributes to Research. In 2018-2020, Schiebinger directed the European Commission Expert Group to produce Gendered Innovations 2: How Inclusive Analysis Contributes to Research and Innovation. Institutes for Gendered Innovations research opened in Soeul, South Korea, in 2015 and in Tokyo, Japan, in 2022.

Schiebinger’s work has been featured in Science: A Framework for Sex, Gender, and Diversity Analysis in Research: Funding Agencies Have Ample Room to Improve Their Policies (2022); Nature: Sex and Gender Analysis Improves Science and Engineering (2019); Nature: Design AI so that it's Fair (2018); Nature: Accounting for Sex and Gender Makes for Better Science (2020).

Her work in the eighteenth century investigates the circulation of knowledge in the Atlantic World. Her Secret Cures of Slaves: People, Plants, and Medicine in the Eighteenth-Century Atlantic World reconceptualizes research in four areas: first and foremost knowledge of African contributions to early modern science; the historiography of race in science; the history of human experimentation; and the role of science in the eighteenth-century Atlantic

world. Her prize-winning Plants and Empire: Colonial Bioprospecting in the Atlantic World investigates women's indigenous knowledge of abortifacients and why this knowledge did not travel.

Londa Schiebinger has been the recipient of numerous prizes and awards, including the prestigious Alexander von Humboldt Research Prize and John Simon Guggenheim Fellowship. She was awarded an honorary doctorate from the Vrije Universiteit Brussel, Belgium (2013), the Faculty of Science, Lund University, Sweden (2017), and the University of Valencia, Spain (2018); the Berlin Falling Walls Breakthrough Winner in Science & Innovation Management (2022). Her work has been translated into numerous languages. In 2022/23, she served as an advisor to the Berlin University Alliance.
