

Yu Wang

Graduate, Stanford Center for Professional Development

Bio

BIO

I'm Yu Wang, and I work at the intersection of AI and the physical world. I earned my Ph.D. in Mechanical Engineering at Stanford, where I studied how to use light and data to better understand complex fuels. These days, I'm at NVIDIA, working on perception systems that help autonomous vehicles see and make sense of the world—even in the dark or in tough weather. I enjoy building things that are both innovative and practical, and I'm passionate about using AI to improve how machines interact with people and their environments.
