Bio

BIO

Dr. Desiree LaBeaud is a physician-scientist, epidemiologist, and professor in the Division of Pediatric Infectious Diseases at Stanford University's School of Medicine. She received her MD from the Medical College of Wisconsin and trained at the Rainbow Babies & Children's Hospital during her pediatric residency and pediatric infectious disease fellowship program. She earned her master's degree in Clinical Research and Epidemiology at Case Western Reserve University. Dr. LaBeaud studies the epidemiology and ecology of domestic and international arboviruses and emerging infections, with an interest in the vector, host, and environmental factors that affect transmission dynamics and spectrum of disease. Her research is community-engaged and seeks to define and then disrupt the underlying structural determinants of health. She studies the human health impacts of climate change including research focused on innovative solutions to the global plastic pollution crisis. Her field sites have included Kenya, Grenada, Pakistan, and Brazil. She currently heads a clinical research lab focused on better understanding the risk factors and long-term health consequences of arboviral infections and the most effective means of prevention. She has also recently launched a nonprofit, the Health and Environmental Research Institute- Kenya (www.heri-kenya.org) which is an initiative focused on Kenya to inspire community education, new research, policy change and grass roots activism in environmental health issues. She is deeply devoted to equitable partnership and recently co-edited an open access book on transformative partnership: <https://link.springer.com/book/10.1007/978-3-031-53793-6>. Dr. LaBeaud is Senior Fellow at the Stanford Woods Institute for the Environment and served as admissions chair of the Emmett Interdisciplinary Program in Environment & Resources. She is currently on the leadership team of the Stanford Human and Planetary Health Center and serves as the Associate Dean of Global Health at the Stanford Center for Innovation in Global Health. She is Fellow of the American Society of Tropical Medicine (ASTMH).

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

Arthropod-borne viruses are emerging and re-emerging infections that are spreading throughout the world. Our laboratory investigates the epidemiology of arboviral infections, focusing on the burden of disease and the long-term complications on human health. In particular, Dr. LaBeaud investigates dengue, chikungunya, and Rift Valley fever viruses in Kenya, where outbreaks cause fever, arthritis, retinitis, encephalitis, and hemorrhagic fever. Our main research questions focus on the risk factors for arboviral infections, the development of diagnostic tests that can be administered in the field to quickly determine what kind of arboviral infection a person has, and the genetic and immunologic investigation of why different people respond differently to the same infection. Our long-term goals are to contribute to a deeper understanding of arboviral infections and their long-term health consequences and to optimize control strategies to prevent these emerging infections. Our laboratory also investigates the effects of antenatal and postnatal parasitic infections on vaccine responses, growth, and development of Kenyan children.

My lab at Stanford supports the field work that is ongoing in Kenya, but we also have several projects that are based locally. We strive to improve diagnostics of arboviral infections and are using Luminex technology to build a new screening assay. We also have created a Luminex based platform to assess vaccine responses against multiple pathogens.

PROJECTS

- Characterizing the Effects of Antenatal Parasitic Infection on Fetal Immune System Development - Stanford University, Case Western Reserve University, Ministry of Health- Kenya (1/1/2016 - 1/1/2017)
- Burden of Chikungunya and Dengue in Kenya, Kenya - Stanford University (7/1/2013 - 6/30/2018)
- Integrated Vector Management as a Strategy for Reduced Disease Risk in a Newly Discovered Region of Dengue Fever in Africa - Stanford (9/1/2015 - 8/31/2020)
- Characterization of Immune Factors of Severe and Chronic Chikungunya Disease in Grenada, West Indies - Stanford (8/1/2015 - 7/31/2016)
- Miniaturized Automated Whole Blood Cellular Analysis System - Stanford (6/23/2015 - 6/22/2020)
- Complex Data and Deep Learning for Disease Outbreak Prediction - Stanford (1/1/2017 - 1/1/2018)
- Predicting dengue transmission in a changing climate to improve mosquito control - Stanford University (Depts of Biology and Pediatrics) (7/1/2016 - 6/30/2018)
- The Spectrum of Zika Virus Disease in Grenada - Stanford (1/1/2017 - 1/1/2018)
- Neurodevelopment and Vector-borne Diseases: Building Research Capacity in the Tropics - Stanford (September 1, 2016 - 8/31/2018)
- Trash to Treasure: Collecting trash for profit to reduce vector breeding sites in Kwale County - Bova Network (9/2018 - 8/2019)
- Assessment of cognitive functioning in children exposed to the Zika virus - USAID (4/2018 - December 2018)
