Published in the field of Chemistry, Kaustabh Basu is a Ph.D. student at Stanford University, where he is working in the Department of Chemistry. His research interests include the development of new therapeutic strategies for lung adenocarcinoma, a type of lung cancer. One of his notable publications is on the therapeutic target PI4KIII# in chromosome 1q-amplified lung adenocarcinoma. This work was published in *Science translational medicine* in 2020. The publication details are as follows:

- **Title**: PI4KIII# is a therapeutic target in chromosome 1q-amplified lung adenocarcinoma.
- **Journal**: *Science translational medicine*
- **Published in**: 2020; 12 (527)
