Bio

As a second-year Ph.D. student in the Emmett Interdisciplinary Program in Environment and Resources, I aim to quantify relationships between environmental exposure and child and infant health outcomes. I am particularly interested in the impact of ambient particulate matter on child respiratory health in Dhaka, Bangladesh, as well as the role of the brick kiln industry in contributing to particulate matter pollution. Broadly, I hope to use data science and community-engaged field methods to examine policy-relevant environmental health issues.

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

Allison's research interests include the geochemistry of heavy metal fate and transport, as well as the public health impacts of exposure to inorganic contaminants in soil, surface water, and groundwater.
