Bio

As a PhD candidate in the Emmett Interdisciplinary Program in Environment and Resources, I investigate links between exposure to environmental contaminants and health outcomes in early life. My dissertation explores links between drinking water contamination in California's Central Valley and adverse birth outcomes. Another area of research investigates the impact of ambient particulate matter pollution on child respiratory health in Dhaka, Bangladesh. Broadly, I hope to use data science and interdisciplinary, community-engaged methods to understand the cumulative impact of chemical contaminants on communities and public health.
