Bio

ACADEMIC APPOINTMENTS

- Associate Professor, Ophthalmology
- Member, Bio-X
- Member, Maternal & Child Health Research Institute (MCHRI)
- Member, Wu Tsai Neurosciences Institute

ADMINISTRATIVE APPOINTMENTS

- Department of Ophthalmology, Stanford University School of Medicine, (2017- present)

HONORS AND AWARDS

- Pathway to Stop Diabetes Career Initiator Award, American Diabetes Association (2016)
- McCormick and Gabilan Faculty Award, McCormick and Gabilan Foundation (2017)
- E. Matilda Ziegler Foundation for the Blind Award, E. Matilda Ziegler Foundation (2018)
- Doris Duke Pilot Funding, Doris Duke Foundation (2022)
- Stanford Diabetes Research Center Pilot and Feasibility Award, Stanford Diabetes Research Center (2025)

PROFESSIONAL EDUCATION

- Postdoc, Harvard Medical School , Genetics (2016)
- PhD, Vanderbilt University , Cell and Developmental Biology (2009)
- BS, Fudan University , Biological Sciences (2004)

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

Our research focuses on unraveling the molecular mechanisms underlying retinal development and diseases. We employ genetic and genomic tools to explore how various retinal cell types, including neurons, glia, and the vasculature, respond to developmental cues and disease insults at the epigenomic and transcriptional levels. In addition, we investigate their interactions and collective contributions to maintain retinal integrity.

1. Investigating retinal development:
We utilize genetic tools and methods such as in vivo plasmid electroporation and CRISPR to dissect the roles of cis-regulatory elements and transcription factors in controlling retinal development.

2. Understanding diabetes-induced cell-type-specific responses in the retina:
Diabetes triggers a range of multicellular responses in the retina, such as vascular lesions, glial dysfunction, and neurodegeneration, all of which contribute to retinopathy. We delve into the detailed molecular mechanisms underlying these diabetes-induced cell-type-specific responses and the pathogenesis of diabetic retinopathy.

3. Developing molecular tools for labeling and manipulation of specific cell types in vivo:
Cis-regulatory elements, particularly enhancers, play pivotal roles in directing tissue- and cell-type-specific expression. Our interest lies in identifying enhancers that can drive cell type-specific expression in the retina and brain. We incorporate these enhancers into plasmid or AAV-based delivery systems, enabling precise labeling and manipulation of specific cell types in vivo.

Teaching

COURSES

2024-25

- Cellular/Molecular Neuroscience Laboratory: NEPR 288 (Sum)

2023-24

- Cellullar/Molecular Neuroscience Laboratory: NEPR 288 (Sum)

2022-23

- Cellullar/Molecular Neuroscience Laboratory: NEPR 288 (Sum)
