Ryan Nitta

Sr Res Scientist-Basic Life, Neurosurgery

Bio

CURRENT ROLE AT STANFORD

The main project of the Li lab is to elucidate the signaling pathways responsible for maintaining and initiating brain tumor growth. Previously the Li lab has identified an interesting protein, known as casein kinase 2, which plays an integral role in adult brain tumor growth. My goal is to expand on this initial finding and determine if casein kinase 2 could be a therapeutically relevant drug target in adult brain tumors and whether this protein plays a role in pediatric brain tumors. The role of the candidate would be the lead researcher on these projects, as well as managing and leading the undergraduate and medical students in the lab. In addition, I am responsible for maintaining the laboratory and assisting in grant writing.

HONORS AND AWARDS

- Benjamin F. Graham Jr. Scholarship, Grinnell College (2000 to 2001)
- Ruth L. Kirschstein National Research Service Award, NIH (2002 to 2007)
- Basic Research Fellowship, ABTA (8-2008 to 8-2010)
- Travel Fellowship School of Medicine Travel Grant, Stanford University School of Medicine (2010)
