Bio

BIO

Dr. Charville has a special interest in the diagnosis of rare tumors that derive from bone and soft tissues, including muscle, fat, blood vessels, cartilage, and other connective tissues. He also specializes in the classification and study of diseases related to the gastrointestinal and hepatopancreatobiliary systems.

Dr. Charville particularly enjoys working alongside Stanford's excellent physicians-in-training to classify the most diagnostically challenging cases in collaboration with pathologists from around the world, bringing to bear cutting-edge techniques for comprehensive histologic and molecular characterization in each case. This experience serves as the inspiration for laboratory-based investigation of the molecular underpinnings of human disease, focusing on genetic and epigenetic mechanisms of neoplasia and the translation of these mechanistic insights into novel diagnostic and predictive biomarkers.
