Katarzyna Wac, Full Professor of Computer Science

Quality of Life Technologies lab, Geneva School of Economics and Management, Center for Informatics, University of Geneva, Switzerland

Research Vision: Leveraging behavioural markers to quantify and improve individuals' Quality of Life in new ways – drawing on new emerging models from computer science incorporating examination, diagnosis, and treatment of daily life as an “organ” – much like a cardiologist examines heart - and the resulting Quality of Life as a “longitudinal vital sign” - routinely reported for patients and non-patients alike.
