Bio

BIO

Associate Professor Lynette Cegelski's research is inspired by the challenge and importance of elucidating chemical structure and function in biological systems and the need for new and unconventional strategies to treat infectious diseases. Cegelski completed her undergraduate studies in Chemistry at SUNY-Binghamton, New York (B.S. summa cum laude and Phi Beta Kappa 1998), where she participated in research to determine the microtubule-bound conformation of the anti-cancer drug Taxol by REDOR solid-state NMR. This formative experience motivated her move to Washington University to conduct her PhD training in the laboratory of Professor Jacob Schaefer (Ph.D. Chemistry 2004). She investigated bacterial and plant macromolecular and whole-cell systems using solid-state NMR, including examining the mode of action of the antibiotic oritavancin and investigating photosynthesis and photorespiration in soybean leaves with $^{13}\text{CO}_2$ and ^{15}N labeling. She introduced the use of 4-frequency TEDOR-REDOR measurements in whole cells for the first time. She trained in Microbiology and Infectious Disease research as a postdoctoral fellow in Molecular Microbiology at the Washington University School of Medicine, working with Professor Scott Hultgren. There, she defined amyloid contributions to E. coli biofilms and introduced the first small-molecule inhibitors of functional amyloid assembly in bacteria. She joined the faculty of the Stanford Chemistry Department in 2008. The Cegelski Research program integrates chemistry, biology, and physics to investigate the assembly and function of macromolecular and whole-cell systems. They are revealing new bacterial structures, uncovering fundamental parameters of chemical composition and architecture in complex biofilm assemblies, and identifying new anti-infectives and anti-infective strategies. Cegelski's work has garnered early career awards, including the Burroughs Wellcome Career Award at the Scientific Interface, the 2010 NIH Director's New Innovator Award, the National Science Foundation CAREER Award, and the Presidential Early Career Award for Scientists and Engineers (PECASE).

ACADEMIC APPOINTMENTS

- Professor, Chemistry
- Professor (By courtesy), Chemical Engineering
- Member, Bio-X
- Faculty Fellow, Sarafan ChEM-H
- Member, Wu Tsai Neurosciences Institute

HONORS AND AWARDS

- Presidential Early Career Award for Scientists and Engineers, National Science Foundation (2019)

- ICMRBS Founder's Medal, International Council on Magnetic Resonance in Biological Systems (2018)
- NSF CAREER Award, National Science Foundation (2015)
- Hellman Faculty Scholar Award, Hellman Fellows Fund (2012)
- Terman Fellowship, Stanford University (2011)
- NIH Director's New Innovator Award, National Institutes of Health (2010)
- Career Award at the Scientific Interface, Burroughs Wellcome Fund (2008)
- Terman Fellowship, Stanford University (2008)

PROFESSIONAL EDUCATION

- Postdoc, Washington University School of Medicine , Molecular Microbiology (2008)
- PhD, Washington University , Chemistry (2004)
- BS, Binghamton University, SUNY , Chemistry (1998)

PATENTS

- Huttner, M.; Wender, P; Cegelski, L.; Zang, Xiaoyu; Antonoplis, A. "United States Patent 62/633,368 (WO2019165051A1) Composition and method for new antimicrobial agents with secondary mode of action", Leland Stanford Junior University, Aug 29, 2019
- Lynette Cegelski, Wiriya Thongsomboon. "United States Patent WO2018035411A1 Production and Use of Phosphoethanolamine Cellulose and Derivatives", Leland Stanford Junior University, Feb 22, 2018
- Lynette Cegelski, Ji Youn Lim. "United States Patent 9,271,493 Methods for Microbial Biofilm Destruction", Leland Stanford Junior University, Mar 1, 2016

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

Our research program is inspired by the challenge and importance of elucidating chemical structure and function in complex biological systems and the need for new strategies to treat infectious diseases. The genomics and proteomics revolutions have been enormously successful in generating crucial "parts lists" for biological systems. Yet, for many fascinating systems, formidable challenges exist in building complete descriptions of how the parts function and assemble into macromolecular complexes and whole-cell factories. We have introduced uniquely enabling problem-solving approaches integrating solid-state NMR spectroscopy with microscopy and biochemical and biophysical tools to determine atomic- and molecular-level detail in complex macromolecular assemblies and whole cells and biofilms. We are uncovering new chemistry and new chemical structures produced in nature. We identify small molecules that influence bacterial assembly processes and use these in chemical genetics approaches to learn about bacterial cell wall, amyloid and biofilm assembly.

Translationally, we have launched a collaborative antibacterial drug design program integrating synthesis, chemical biology, and mechanistic biochemistry and biophysics directed at the discovery and development of new antibacterial therapeutics targeting difficult-to-treat bacteria.

Teaching

COURSES

2023-24

- Biochemistry I: CHEM 181, CHEMENG 181, CHEMENG 281 (Aut)
- Chemistry Research Proposal: CHEM 211C (Win)

- Chemistry Research Seminar Presentation: CHEM 211B (Win)
- Curricular Practical Training for Chemists: CHEM 390 (Aut, Win, Spr, Sum)
- Manipulating Spins: NMR Theory and Applications: CHEM 277 (Spr)
- Research Progress in Chemistry: CHEM 211A (Win)

2022-23

- Biochemistry I: CHEM 181, CHEMENG 181, CHEMENG 281 (Aut)
- Chemistry Research Proposal: CHEM 211C (Win)
- Chemistry Research Seminar Presentation: CHEM 211B (Win)
- Curricular Practical Training for Chemists: CHEM 390 (Aut, Win, Spr, Sum)
- Research Progress in Chemistry: CHEM 211A (Win)
- Research Progress in Inorganic Chemistry: CHEM 258C (Aut)

2021-22

- Chemical Principles II: CHEM 31B (Win)
- Chemistry Research Proposal: CHEM 211C (Win)
- Chemistry Research Seminar Presentation: CHEM 211B (Win)
- Curricular Practical Training for Chemists: CHEM 390 (Aut, Win, Spr, Sum)
- Introduction to NMR: CHEM 277 (Aut)
- Research Progress in Chemistry: CHEM 211A (Win)

2020-21

- Biochemistry I: CHEM 181, CHEMENG 181, CHEMENG 281 (Aut)
- Chemical Principles II: CHEM 31B (Win)

STANFORD ADVISEES

Doctoral Dissertation Reader (AC)

Braxton Bell, John Bennett, Chiu-Chun Chou, Dory DeWeese, Haotian Du, Sarah E Holmes, Erica Liu, Jack Liu, Lisha Ou, Gabby Tender

Postdoctoral Faculty Sponsor

Schuyler Chambers, Xinyu Liu

Doctoral Dissertation Advisor (AC)

Maxwell Austin, Jamie Jeffries, Till Kallem

GRADUATE AND FELLOWSHIP PROGRAM AFFILIATIONS

- Biophysics (Phd Program)
