

Stanford

Sadie Rosalie Gruenwald Cwikiel

Casual - Non-Exempt, Center for Ocean Solutions

Bio

BIO

Sadie is a senior majoring in Earth Systems in the Oceans and Climate track and minoring in creative writing. She grew up in Northern Michigan and has always loved spending time outside. She is interested in oceanography, tropical ecosystems, and conservation. Her favorite Stanford quarter was spent studying ecology and anthropology during the Wrigley Field Program in Hawaii. Her group research project on parrotfish in Hawaiian coral reefs inspired her love for marine ecosystems. Sadie also studied abroad in Santiago, Chile, and enjoyed hiking in the Andes and practicing Spanish. She has spent her summers researching the impacts of drought and flooding events on soil respiration, working with a citizen science program in the Peruvian rainforest, and sailing through the Phoenix Islands Protected Area during a SEA Semester. Outside of academics, Sadie enjoys leading SPOT and adventure trips with Stanford Outdoor Education, leading tours at Jasper Ridge, playing drums in LSJUMB, creative writing, and dancing. In her free time, she likes to go hiking and camping, do ceramics, or go to the beach.
