

Annika Mari Kristin Enejder

Physical Science Research Scientist

T. H. Geballe Laboratory for Advanced Materials

 NIH Biosketch available Online

 Curriculum Vitae available Online

Bio

ACADEMIC APPOINTMENTS

- Physical Science Research Scientist, T. H. Geballe Laboratory for Advanced Materials

HONORS AND AWARDS

- "Women in Optics" - One of 15 leading female principal investigators in Optics worldwide, The International Society for Optics and Photonics - SPIE (2011)
- "Promising young scientists" at the Nobel festivities, Science school for young scientists/Nobel committee (December 1988)

BOARDS, ADVISORY COMMITTEES, PROFESSIONAL ORGANIZATIONS

- Chair, Applications of CARS microscopy, Photonics West, SPIE (2011 - 2014)
- Program Committee member, Photonic Applications in Biology and Medicine, The Conference on Lasers and Electro-Optics, CLEO (2015 - 2016)
- Chair/Coordinator, Innovative Training Network in Nonlinear Microscopy, The European Research Council (2013 - 2017)
- Chair, The European network for CARS microscopy "microCARS" (2006 - 2011)
- Member of the Review Board, Applied Physics, The Swedish Research Council (2004 - 2006)

PROFESSIONAL EDUCATION

- PhD, Lund University , Physics (1997)
- M.Sc., Lund University , Engineering Physics (1992)

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

"A picture is worth a thousand words"; The mission of my research is to contribute with a visual understanding for how macromolecules assemble and form functional structures in living cells/organoids/tissues and innovative biomaterials by probing inherent molecular/electronic vibrations using nonlinear laser excitation in a microscope: Coherent Anti-Stokes Raman Scattering (CARS), Stimulated Raman Scattering (SRS), Second/Third Harmonic Generation (SHG/THG), and multiphoton fluorescence emission. With these emerging microscopy techniques, no artificial labelling or sample preparation are needed, hence, macromolecular assemblies and kinetics can be visualized under natural conditions and amounts can be given in quantitative numbers at sub-micron resolution and for extended periods of time at sub-second resolution.

Beside technical development and investigations of new approaches of nonlinear microscopy, my research interest is to use them to explore disease- and age-related changes in the extracellular environment and the cellular lipid metabolism, e.g. in different cancers, liver diseases and in the aging brain. In collaboration with experts on the different topics, I investigate cells grown in 3D tissue-mimicking matrices, living organoids, and tissues donated from patients. Based on the mechanisms

observed, we test new drugs, normalizing the extracellular environment and cell metabolism. By monitoring specific vibrations of the drug molecules, their distributions and cell responses can be investigated at cellular level versus time.
