

J. Bradley Zuchero

Assistant Professor of Neurosurgery

 Curriculum Vitae available Online

Bio

CURRENT ROLE AT STANFORD

Assistant Professor of Neurosurgery

Covert-Matera Families Endowed Faculty Scholar

ACADEMIC APPOINTMENTS

- Assistant Professor, Neurosurgery
- Member, Bio-X
- Member, Maternal & Child Health Research Institute (MCHRI)
- Faculty Fellow, Sarafan ChEM-H
- Member, Wu Tsai Neurosciences Institute

HONORS AND AWARDS

- Covert-Matera Families Endowed Faculty Scholar Award, Stanford Maternal & Child Health Research Institute (2023)
- Koret Early Career Award, Stanford University (2020)
- Beckman Young Investigator Award, The Arnold and Mabel Beckman Foundation (2019-2023)
- Harry Weaver Neuroscience Scholar Award, National Multiple Sclerosis Society (2018-2023)
- McKnight Scholar Award, The McKnight Endowment Fund for Neuroscience (2018-2021)
- Research Grant, The Shurl and Kay Curci Foundation (2018-2020)
- Career Transition Award, National Multiple Sclerosis Society (2014-2019)
- Discovery Research Award, Myelin Repair Foundation (2014)
- Pioneer Award, Myelin Repair Foundation (2012)
- Postdoctoral Fellowship, Life Sciences Research Foundation (2011-2014)
- Postdoctoral Fellowship, National Multiple Sclerosis Society (2011)
- Robert Day Allen Fellowship, Marine Biological Laboratory, Woods Hole (2009)

PROFESSIONAL EDUCATION

- Postdoctoral, Stanford University , Glial-neuron interactions (2016)
- PhD, UCSF , Biochemistry & Cell Biology (2009)
- BA, Vassar College , Biology (2002)

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

Glia are a frontier of neuroscience, and overwhelming evidence from the last decade shows that they are essential regulators of all aspects of the nervous system. The Zuchero Lab aims to uncover how glial cells regulate neural development and how their dysfunction contributes to diseases like multiple sclerosis (MS), Alzheimer's disease, and in injuries like stroke.

Although glia represent more than half of the cells in the human brain, fundamental questions remain to be answered. How do glia develop their highly specialized morphologies and interact with neurons to powerfully control form and function of the nervous system? How is this disrupted in neurodegenerative diseases and after injury? By bringing cutting-edge cell biology techniques to the study of glia, we aim to uncover how glia help sculpt and regulate the nervous system and test their potential as novel, untapped therapeutic targets for disease and injury.

We are particularly interested in myelin, the insulating sheath around neuronal axons that is lost in diseases like MS. How do oligodendrocytes- the glial cell that produces myelin in the central nervous system- form and remodel myelin, and why do they fail to regenerate myelin in disease? Our current projects aim to use cell biology and neuroscience approaches to answer these fundamental questions. Ultimately we hope our work will lead to much-needed therapies to promote remyelination in patients.

Teaching

COURSES

2023-24

- Cellular/Molecular Neuroscience Laboratory: NEPR 288 (Aut)

2022-23

- Cellular/Molecular Neuroscience Laboratory: NEPR 288 (Aut)
- Neuroscience Journal Club and Professional Development Series: NEPR 280 (Aut, Win, Spr)

2021-22

- Neuroscience Journal Club and Professional Development Series: NEPR 280 (Win, Spr)

STANFORD ADVISEES

Doctoral Dissertation Reader (AC)

Clara Bacmeister, Tamara Chan, Jolie Huang, Weaverly Colleen Lee, Keiramarie Robertson, Ved Topkar

Postdoctoral Faculty Sponsor

Graham Jones, Mable Lam

Doctoral Dissertation Advisor (AC)

Madeline Cooper, Emma O'Connell, Maya Weigel, Kathryn Wu

GRADUATE AND FELLOWSHIP PROGRAM AFFILIATIONS

- Biophysics (Phd Program)
- Developmental Biology (Phd Program)

- Neurosciences (Phd Program)
- Stem Cell Biology and Regenerative Medicine (Phd Program)
