#### BIO

Hi there! I'm in the class of 2022 studying Bioengineering and conducting research with the Palmer group on the history of human practices in synthetic biology, using the iGEM competition as a test bed. Outside of academics, I'm also involved with the Multiracial Identified Community at Stanford (MICS) and the JEDI initiatives within the Bioengineering department. I also love to take naps at the beach, try to meet my reading goal for the year, and spend time with friends and family!
