Bio

BIO

A hydrologist and water resources specialist, Freyberg studies reservoir sedimentation and hydrology, hydrologic ecosystem services, summer drying of Pacific coast intermittent streams, tropical rainfall and throughfall, surface water-ground water interactions, especially in reservoir/sediment systems, and scaling and spatial distribution of recycled water systems.

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

My students and I study sediment and water balances in aging reservoirs, hydrologic responses and landslide risk induced by precipitation patterns in the Northern Range of Trinidad, the design of centralized and decentralized wastewater collection, treatment, and reuse systems in urban areas, and hydrologic ecosystem services in urban areas and in systems for which sediment production, transport, and deposition have significant consequences.

Our methods typically combine field data collection and analysis with numerical modeling, both of physical process models and systems models with optimization.
