

Stanford

Chandrahaas Vadali

Masters Student in Materials Science and Engineering, admitted Autumn 2019

Bio

BIO

I am Master's student in the Department of Material Science and Engineering at Stanford. My primary interests lie in semiconductor devices, modeling, and fabrication. I have always been at heart, an engineer first, and then a materials engineer. A modern-day engineer should be well equipped not just to be able to solve problems but also to able to ask tough questions which are necessary to change the innovation landscape.
